

# WALL-MOUNT SINK INSTALLATION INSTRUCTIONS

Following these mounting instructions with the hardware included will be more than sufficient to support wall mounted installation.

## Included Installation Hardware

**x2** Hanger  
Bolts  
(8mm)

**x2** Washer

**x2** Wall Anchor

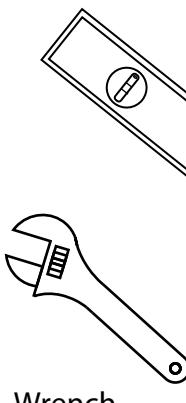

**x2** Nuts

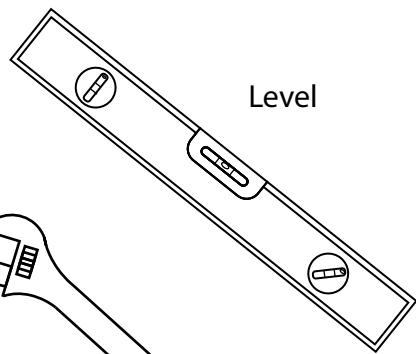

**x2** Insulation  
Sleeve

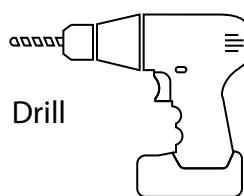

## Tools You May Need

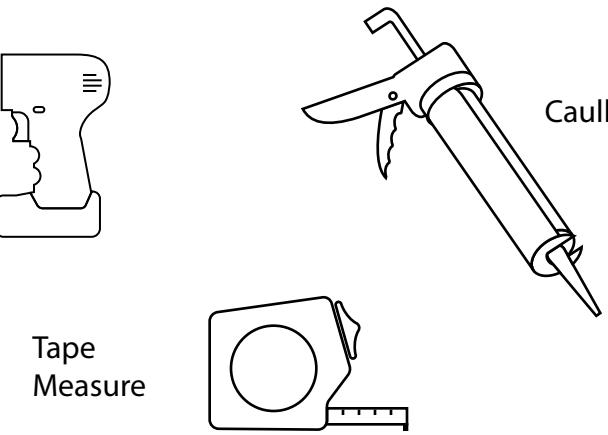

Wrench

Level

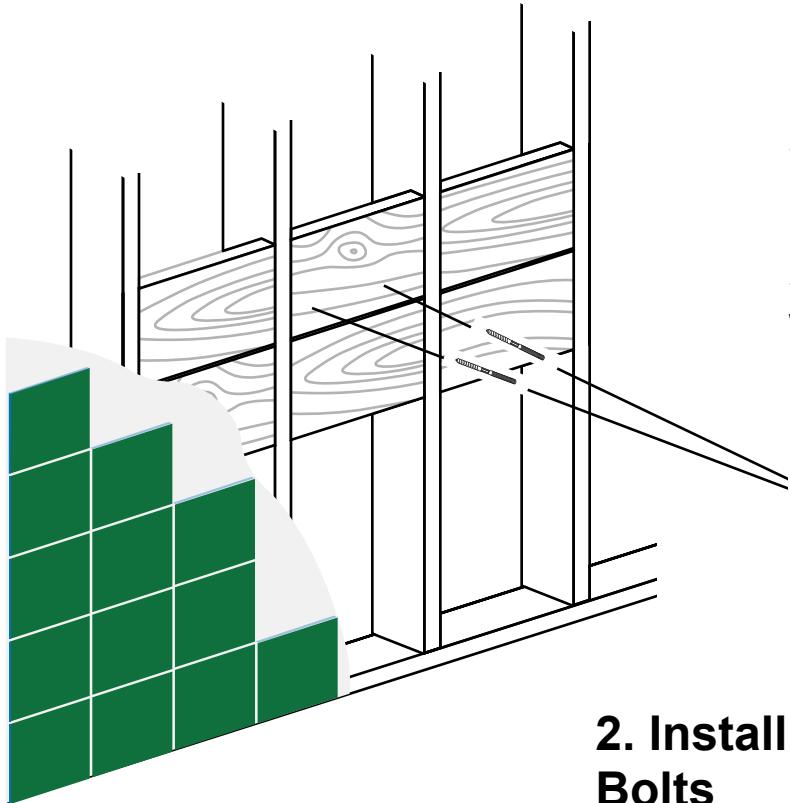

Drill

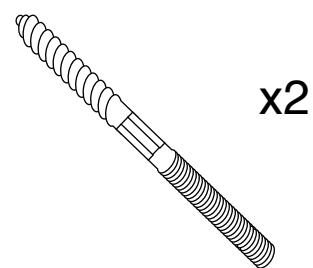

Caulk

Tape  
Measure

## 1. Prepare Location

Locate studs in the wall. If the studs do not line up with the holes in the back of the sink, be sure to add sufficient wall supports behind the finished wall.

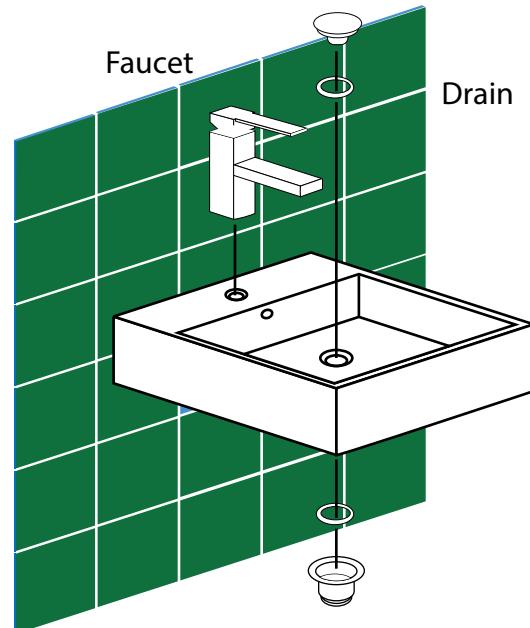

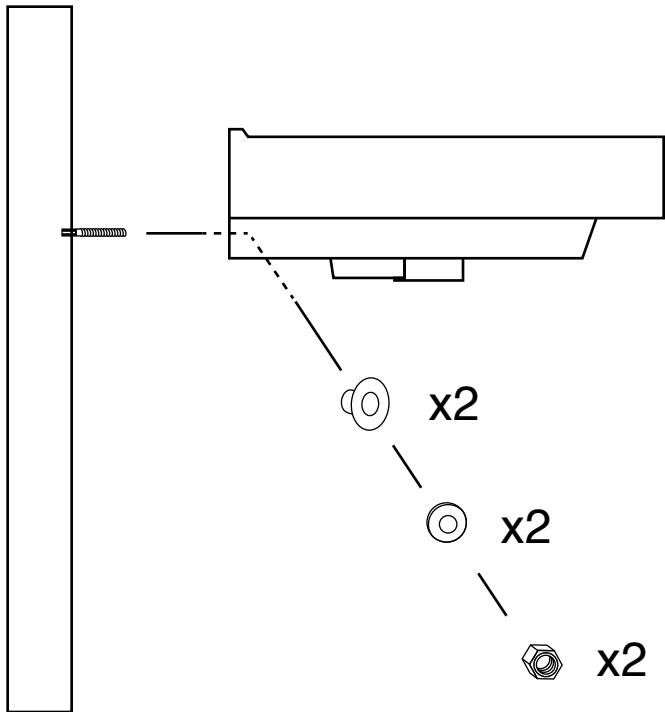

## 2. Install Hanger Bolts

Measure the distance between mounting holes in the back of the sink. Drill pilot holes in wood and screw in hanger bolts. Check position with a level.

## 3. Faucet Installation

Install your faucet and drain prior to mounting the sink.

## 4. Secure Sink With Washers and Nuts

Thread the sink on to the two hanger bolts. Secure the sink with insulation sleeves, washers and nuts. Be careful not to over tighten the bolts. Over tightening can cause the sink to chip and crack.

## 5. Install Caulk

Finish the sink installation with a bead of caulk between the sink and wall.
