Outdoor Post Lantern User Manual

Wire Connectors

Mounting Screws

Set Screws

Lock Screws

INSTALLATION INSTRUCTIONS:

1. Place the base on top of the post and position as required.
2. Use an electric drill to make 4 holes in the desired surface, place the provided set screws into holes, place the base in line with the holes, and screw mounting screws.
3. Pull the power supply wires out from the post and the fixture wires out from the fixture body, to allow connection of Black, White and ground lead to appropriate supply leads, using approved wire connectors.
4. Secure the fixture body to the post using the wood screws provided. Install a light bulb. The bulb must not exceed wattage specified on the fixture label (100W Max.).
5. Using the lock screw screwing the top cover fixture body. Turn on the power.

SAFETY WARNING

-  Most electrical accidents are caused by ignorance and carelessness. With basic knowledge of electricity and caution, you can easily handle basic electrical installation and repairs. Here are some basic guidelines for your electrical installation:
- Before working, go to the main panel to turn off the switch or remove the fuse. Tape a sign to the main panel to warn people to keep away from the main panel when you are ready to work.
 - Before touching any wire, use a voltage tester to check if it's live. Make sure there is no electricity through wires. Check both outlets when you check for voltage in the receptacle. Because each of the outlets may be controlled by separate circuit.
 - Before you changing fuses, switch off the main power first. Make sure your body is dry and place one hand behind your back to avoid the electricity go completely through your chest.
 - Only use the insulated rim to touch a plug fuse. Use a fuse puller to remove cartridge fuses.
 - Use the insulated tools made of wood or fiberglass.
 - Make sure there are dry-chemical fire extinguishers in the kitchen, basement and workshop.
 - Enable grounding devices. Make sure all appliances and electrical systems are grounded.
 - Meet or exceed all the electrical working rules when you are doing electrical work.
 - Always make sure you are working with enough lights because it's easy to make mistakes if there is little light.
 - When you are not sure of the safety and electrical rules or tests. Please ask for a professional electrician for help.

TURN OFF YOUR SWITCH

FIG.1. Place the wall switch to the "OFF" position.

FIG.2. Place either the main (Master) switch to "OFF" position, cutting off power to your entire home OR turn off the individual switch that provides power to where the fixture will be installed.

FIG.3. Place either the main (Master) switch to "OFF" position, cutting off power to the entire home OR unscrew the fuse that provides power to where the fixture will be installed.
