CERTIFICATE OF LISTING

IAPMO Research and Testing, Inc. is a product certification body which tests and inspects samples taken from the supplier's stock or from the market or a combination of both to verify compliance to the requirements of applicable codes and standards. This activity is coupled with periodic surveillance of the supplier's factory and operations as well as the assessment of the supplier's Quality Assurance System. This listing is subject to the conditions set forth in the characteristics below and is not to be construed as any recommendation, assurance or guarantee by IAPMO Research and Testing, Inc. or the product compliance by Authorized Testing Laboratories.

This certificate is not evidence of current listing. To verify listing status, visit the IAPMO R&T Product Listing Directory at pld.iapmo.org

Effective Date:	December 2019	-Rev. 2/24/2020-	Void After: December 2024
Product:	Flexible Water Connectors		File No. 5311
Issued To:	Fanakli Group Inc. Mechanical & Electrical Industrial Zone, Yuhuan County, Yuhuan 317400, ZHEJIANG China		
Identification:	Products shall be marked with manufacturer's name or trademark, a statement "For use with water in accessible locations only." The products shall also bear the cUPC® certification mark. Markings shall be by means of either a permanent mark on the product, a label on the product or a tag attached to the product.		
Characteristics:	Flexible water connectors manufactured in various sizes, lengths and metal and fittings for hot or cold water applications that consist of an inner tube, which may or may not have an outer braided cover. Connectors are to be installed for use in accessible locations only. To be installed in accordance with the manufacturer's instruction, and the latest edition of the Uniform Plumbing Code and National Plumbing Code of Canada.		
	Products listed on this certificate have been tested by an IAPMO R&T recognized laboratory. This recognition has been granted based upon the

BEFORE INSTALLATION

Usage

As shown in the right, the water outflow can be turned on or off independently by the switch button, and the water temperature can be adjusted by the constant temperature hand wheel on the right.

Notes

- 1. The valve core of the main body has been tested and adjusted by the manufacturer. Please do not disassemble and install it by yourself.
- 2. Hot water temperature 55-80 °C (recommended 65 °C), cold water temperature 5-29 °C (recommended 15 °C).
- 3. Cold water should be connected to the main body on the side marked with "C", and hot water on the side marked with "H". Revered connection is strictly prohibited. The water pressure at the cold and hot water inlet should not vary too much (pressure difference between the two ends ≤ 20%).
- 4. The working water pressure of the valve core is 0.1-0.5 MPa (including the pressure of cold or hot water). Working water pressure of 0.3 MPa is recommended to use. A pressure reducing valve should be installed on the pipeline when the working water pressure exceeds 0.5 MPa.
- 5. The temperature displayed on the constant temperature handwheel is adjusted under the specific water temperature condition in the factory. The product may be different as the working water temperature changes. The difference of ± 2 °C is normal. If there is large difference, it should be adjusted by professional personnel.

Piping Diagram

Installation of Main Body
Parts list

NO.	Name	Quantity
1	Expansible colloidal particle	4
2	Self-tapping screw	4
3	Pre-embedded main body	1
4	Decorative panel	1
5	2.5mm hexagon wrench	1
6	Extension rod	3
7	Locating plate	1

INSTALL THE SHOWER VALVE BODY

This product has been inspected and debugged by the factory to the best condition. Please do not disassemble and assemble it yourself.

Before installing the product, please be sure to remove sundries and sludge from the water pipe to prevent sundries from blocking the product.

1. According to the basic size of the product (with reference to the figure above), the pre-embedded grooves of main body, inlets of hot and cold water and mixed water outlets and joints should be excavated.

2. Drill four 6-mm holes with percussion drill according to the product size.

3. Drive 4 expansible colloidal particles into the drilled holes with hammer.

4. Each pipe should be linked and connected to water to confirm there is no leakage.

5. Adjust the pre-embedded main body to the horizontal line and fix the main body on the wall with four self-tapping screw and a cross screwdriver. Seal the pipeline with cement filler.

6. Loosen the two M5 screws on the sheath counterclockwise with a cross screwdriver and remove the sheath.

INSTALL THE SHOWER VALVE BODY

7. First, take out the color button of the constant temperature handwheel; then loosen the main body of the handwheel counterclockwise with the 2.5-mm hexagon wrench, and unload it. Do not rotate the constant temperature handwheel when taking it out. Ensure that the button of the constant temperature handwheel is aligned with the 38-degree line on the panel.

8. Tighten the three extension rods on the valve core with button; then put the positioning plate on the surface of wall; cut off the redundant part by cutting machine or the blade along the outer plane of the extension rod of positioning plate; finally, remove the positioning plate again (as shown in the figure).

9. Install the panel on the main body in a balanced manner.

10. Install the parts of the constant temperature handwheel on the main body in the opposite direction of unloading. (please ensure that the valve core does not rotate when installing the constant temperature hand wheel and the direction of the button is aligned with the direction of the outlet pipe.)

INSTALLATION OF THE HAND SHOWER

1. Wrap the PTFE tape on the 1/2 thread of the stand for shower head.

2. Screw the stand for shower head clockwise on the outlet hole of the water outlet.

3. Connect the water outlet of the stand for shower head with the tube of shower head, and put the hand-held shower head in the stand.

INSTALLATION OF RAIN SHOWER HEAD

Parts list

NO.	Name	Qty
1	Pre-embedded main body	4
2	panel	1
3	Parts of shower head	1
4	2.5mm hexagon wrench	1
5	Explosion screw	1

Sketchy diagram

INSTALLATION OF RAIN SHOWER HEAD

1. Dig the main body pre-embedment outlet, inlet pipe1 and inlet pipe2 on the wall according to the main body size drawing.

2. Drill four Ø0.31" holes on the wall where the pre-embedded holes have been dug based on the basic dimensions of the fixed holes.

3. The pre-embedded main body is sealed with PTFE tape to connect the two water inlet pipes, and tighten them with vigorously pliers to confirm that there is no water leakage.

4. Adjust the level and position of the embedded main body that has been connected to the water pipe. Use four explosive screws to fix the embedded main body. Then seal the wall with concrete filler in the already dug embedded hole.

5. Put the panel on the shower arm of the shower assembly, the direction is as shown in the figure.

6. Use a screwdriver to loosen the two screws on the embedded main body and remove the sheath.

INSTALLATION OF RAIN SHOWER HEAD

7. Insert the shower assembly into the embedded body.

8. Tighten the shower head screws with a hexagon wrench.

9. Press the panel tightly against the wall.

CLEANING CARE

1. To keep the surface of the product clean and bright, please wash it frequently:

- A. Rinse with water and dry with soft cotton cloth;
- B. Do not use abrasive detergent, emery cloth and sandpaper;
- C. Do not use any acid cleaner, polish, soap, coarse detergent, abrasive polish.

2. When the water outflow is reduced or the temperature is difficult to adjust, please follow the following steps to remove the impurities on the filter screen: (as shown above)

- A. Disassemble the inlet parts on both sides of the main body with tools;
- B. Brush the impurities attached to the filter screen on the backwater-proof inlet;
- C. Reinstall the parts sequentially, and then open the supply of cold and hot water on the body part.
