Hanging Cabinets to Wall

Parts Needed.

1

Use stud finder to locate the studs and mark the wall with a pencil.

Step A. Determine the height off the ground you would like cabinet to be and make a horizontal mark at this position.

Step B. Next mark the width cabinet in the intended position and ensure the wall studs fall at least 1.25" in from the edge of the cabinets. This will ensure there is no interference with the edges of the cabinet and the wall bracket when hanging the cabinet on the wall.

3 Planning the general position of cabinets. (cont.)

Step C. Measuring up from the line marked in Step A, make a horizontal mark at the following heights where they intersect the wall stud marks to determine where the top of the cabinet will be (and where the hanging bracket will be installed).

Measure 80" vertically from base line and mark at stud locations.

Step D. Ensure the cabinets will be at a suitable working height and that your wall cabinets are not out of reach.
