Step1 : Disassemble the hanging plate of the lamp, then the hole position of the hanging plate is measured and located on the ceiling by removing the hole position of the hanging plate.
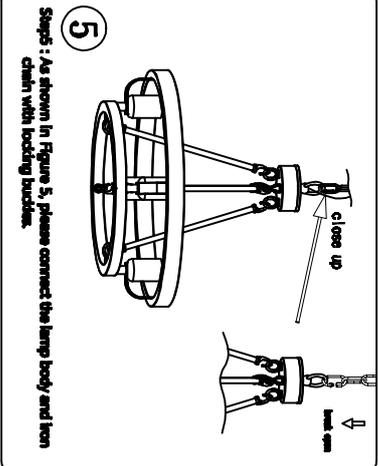

Step2 : Punch holes in the positioning mark according to the size of the expansion screw, then hammer the expansion screw into the hole with a hammer (leaving one centimeter outside) and then counter-clockwise unscrew the nut and reason to lock the hanging plate. (If your ceiling is not concrete but a wooden suspended ceiling, use self-tapping screws directly to secure the cross-hanging panels.
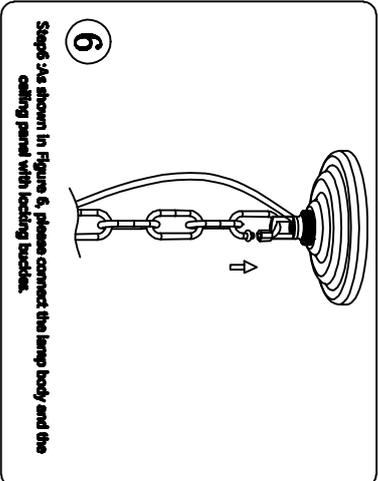

Step3 : As shown in the figure 3. The main line threads through the buttons and cable drums.

Step4 : As shown in the figure 4. Suspend the circular ring and lamp holder with the suspension rod.
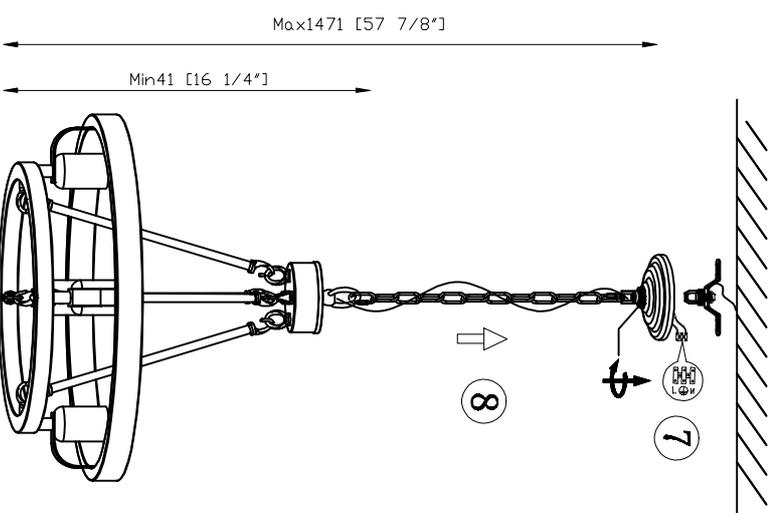

Step5 : As shown in Figure 5, please connect the lamp body and iron chain with locking buckle.

Step 7 :Connect the ground wire properly and switch on the 110V power supply. Check the main wire of the lamp body to see if the lamp can work properly. It is recommended that a professional electrician install this lamp.

Step 8 :Finally, use a circular ring to fix the ceiling-mounted plate firmly on the hanging plate.
